

VIAL sv-XL30

Puncture Set with Screw Cap for Oocytes

Product description

- Specially designed to maintain follicular fluid temperature. When the vial is placed within a heat-controlled nest (Carteau & Ost, Labotect, etc.), the flange located in the upper part (diameter equal to the vial base) prevents arrival of outside air. (Outside air can potentially lead to turmoil and heat shocks detrimental to oocytes.)
- Cap and vial components selected to avoid any deformation at 37°C.
- Cork designed to prevent leaking.
- Handling is easier with our quarter-turn screw-thread.
